## Body protection: skin protection

<b>Standard and certification</b>	Manufactured according to basic health and safety requirements specified in Appendix II of Royal Decree 1407/1992 of 20 November.									
<b>Applications</b>	Moisturizing sun screen, especially recommended for all kinds of outdoor work and activities. Sectors: construction, agriculture, fishing, hunting...									
<b>Conservation Storage - Expiry</b>	Store in a cool, dry place, free from humidity. Store in original container. Best used within 29 months of production date on package.									
<b>Directions Use</b>	<p>Moisturizing sun cream with high protection factor: 50+.</p> <p>Apply the sun protection 30 minutes before exposure.</p> <p>Extend an even, generous and regular layer over all the parts of the body exposed to the sun, taking special care in areas of the body that are most frequently burned: shoulders, nose, back...</p> <p>Repeat the application every 2 hours as it acts on the surface and can be eliminated by sweat and contact with water.</p> <p>Avoid intense midday sun.</p> <p>The sun protection factor (SPF) is an index that expresses the number of times that the sun cream increases the capacity of the skin's natural defence from reddening before burning. The SPF 30 of the Sundermia cream means that it provides 30 times more protection (if a person takes 5 minutes to burn, with SUNDERMIA it would take 150 minutes).</p> <p>The sun protectors are classified in 4 categories, according to the index:</p> <p style="text-align: center;"> <span style="margin-right: 20px;">_____ Low _____</span> <span style="margin-right: 20px;">_____ Moderate _____</span> <span style="margin-right: 20px;">_____ High _____</span> <span style="margin-right: 20px;">_____ Very high _____</span> </p> <p style="text-align: center;"> <span style="margin-right: 20px;">SPF between 6 and 14</span> <span style="margin-right: 20px;">SPF between 15 and 29</span> <span style="margin-right: 20px;">SFP between 30 and 59</span> <span>SPF equal or superior to 60</span> </p> <p>Medop does not recommend using low protection indexes for work as these are only designed for short periods of exposure. A working day is considered to be long or very long exposure, therefore a High or Very high protection should be used.</p>									
<b>Presentation</b>	100 ml tube: 20 units per carton. Monodose: 200 units per carton.
